

TEAM GAIA

Gender & Climate

Sandra Martos, Maya Camps, Laure-Anaïs Perich, Javier Andreu

Using open-source data on gender inequality and climate change to model the relationship between these two topics, and proposing a solution that promotes both gender equality and climate action

“

The researchers Neumayer and Plümper analyzed disasters in 141 countries and found that, when it came to deaths, gender differences were directly linked to women's economic and social rights; in societies where women and men enjoyed equal rights, disasters caused the same number of deaths in both sexes.

”

Objectives

1

Create an interactive and informative website gathering all the information available

2

Useful for public institutions worldwide as a database in order to identify zones of major risks or priority zones...

3

... but also for the general public to raise awareness

The Climate Gap

Climate change and Gender issues, NO correlation?

Explore the map and find out real cases where gender inequity worsens the impact of the climate crisis

Project The Climate Gap

- **Interactive map with different filters (based on NASA data)**
- **Descriptive page of main reasons justifying the gender gap**
- **Descriptive page of major challenges for implementation and ideas of potential solutions**
- **Examples of local implemented solutions**

Where should we act first?

Add the following information

- Flood risk
- Drought risk
- Food insecurity risk
- Socio Economic Development

Local Initiatives

Women farmers in Malawi tackle climate change and gender inequalities through greenhouse programme

"Investing in women farmers who are the backbone of our agriculture sector is key to ending poverty".
